

company overview

Efficiency. Productivity. Creativity.

Since 2006 Nova has been a software development innovator, helping re/insurance and finance clients succeed by enabling technology to bring efficiencies to their business. Nova is expert in the development and integration of complex enterprise-level solutions and provides a well-balanced blend of technical skills, market knowledge, effective methodology and a passion for IT.

Working almost exclusively with clients in the re/insurance and finance sectors has offered us a great insight into the core technology, workflows and processes. This enables us to quickly deliver value and advise on opportunities to optimise an environment.

about us

Our People

Our most valuable resource is our people. We have carefully selected a team of talented individuals and we take the time to continually develop skills and keep up to date with the latest technology. Our typical Senior Developer is someone with 10+ year's development experience and strengths in engineering, architecture and the .NET framework. A passion for on-going learning and development is also a must!

Market Knowledge

As a Bermuda-based company, Nova works extensively in the re/insurance and financial markets and can bring significant experience to a project. We have developed and maintained mission critical underwriting, modelling, claims, premium accounting and pricing solutions for the reinsurance and financial sectors but can also apply our skills in other sectors.

Quality

We put an emphasis on quality, knowing our clients need to rely on our solutions to run their business. From planning and idea's sharing through to development and testing, quality is central to our approach and methodology. A significant benefit to our clients is that through Nova they can benefit from the experience of the whole team rather than that of an individual.

With a singular focus on software development and a philosophy of long-term partnership with customers, Nova is proud of all the solutions we have delivered to clients.

Project Methodology

Nova works to a proven methodology to deliver the best results for our clients in the most efficient manner. Working with Nova does not start with laborious project documentation. Instead, we meet to discuss the objectives of the project to provide you with approximate timings and costs. We would then work to the 'SCRUM' methodology which involves small, iterative steps, to work through the features and functionality in priority order. You'll quickly have something to use and give us feedback to refine your ideas even while development is in progress.

A customer can expect;

- Detailed project planning and regular status updates
- Documented source code implemented in compliance with the latest industry standards
- Appropriate software quality assurance testing
- Nova can provide a project manager or work with the clients
